An Era of New Challenge Begins! The path we walked will create our own destiny.

Commemorating the 125th founding anniversary of the company, we established the Penta-Ocean Museum as a communication hub for discovering the "history of challenges by practicing the pioneering spirit" and "new challenges towards the future".
The museum exhibition areas depict three major themes of "History of Challenges", "Global" and "Creation of Technologies".
The visitors are navigated through the trajectory of POC's past events and are encouraged to experience first-hand the future that we strive for.

1 The “Global (Suez)” Zone

Showcasing the “Pioneering Spirit”, our corporate DNA

This zone exhibits the cutter head of a dredger used for the Suez Canal Expansion Project, which spearheaded our global expansion. It perfectly embodies the “Pioneering Spirit”, which is our corporate DNA.

2 The “History of Challenges” Zone

The path of Penta-Ocean Construction over the last 125 years

Founded in 1896 as Mizuno-gumi in Kure City, Hiroshima Prefecture, we expanded our business areas from marine civil engineering to land civil engineering and building construction. This zone showcases our history of challenges driven by technological sophistication and the pioneering spirit.

3 The “Global (Singapore)” Zone

The long track record and the foundation of trust in Singapore

This zone provides an overview of our continuous challenges over half a century in Singapore, showcasing memorable projects in the arenas of marine civil engineering, land civil engineering and building construction.

4 The “Creation of Technologies” Zone

Latest technologies that will shape the future

This zone allows visitors to have hands-on experience on future innovations and technological advancement, including our successful inter-departmental collaboration (civil engineering, building construction, domestic and overseas), Digital Transformation (DX), offshore wind power and Net Zero Energy Buildings (ZEB).
